EXPERIENCE

INDEPENDENT PROJECTS & CONTRIBUTIONS

CREATOR & MAINTAINER | GENAICORE (OPEN-SOURCE .NET 10 LLM GATEWAY)

- **Engineered a high-throughput, unified API gateway in .NET 10** providing a single, OpenAI-compatible abstraction layer for 10+ major LLM providers (including OpenAI, Anthropic, Gemini, and Mistral).

ARCHITECT & MAINTAINER | HIGH-AVAILABILITY BARE-METAL CLUSTER

- **Designed and orchestrated a self-healing, multi-node container environment** leveraging Kubernetes (K3s) and Docker to ensure fault tolerance and resilient workload deployments.
- **Automated cluster lifecycles and VM template provisioning** by developing modular Infrastructure as Code (IaC) architectures utilizing Terraform and Packer scripts.
- **Secured node communication and eliminated configuration drift** across critical cluster nodes using automated operational pipelines, Cloudflare DNS tunnels, and Tailscale networking.

FULL-STACK ENGINEERING & COMMUNITY

- **Architected TypeScript-driven Vue.js applications on GCP** (Firebase Hosting & Cloud Firestore), optimizing NoSQL query structures to efficiently render large-scale document datasets.
- **Technical Workshop Facilitator (FIU MangoHacks & ShellHacks)**: Mentored aspiring software engineers, leading workshops focused on modern web application design, system architecture, and production API integrations. Check YouTube Short.

STAFF SOFTWARE ENGINEER | SEABOARD MARINE – 08/2026 - PRESENT

- **Spearheaded the end-to-end delivery of an enterprise internal procurement platform** built on a modular-monolith architecture, streamlining cross-department requisitions while maintaining high transactional integrity.
- **Owned all technical and architectural decisions** from initial domain modeling through production deployment, encompassing domain-driven design, relational database schemas, and robust API specifications.
- **Engineered a custom, reusable UI component library from scratch**, establishing standardized design patterns and accelerating feature delivery across internal procurement workflows.
- **Architected fine-grained Role-Based Access Control (RBAC)** security frameworks and governance policies to enforce strict authorization boundaries across sensitive financial approval tiers.
- **Provisioned scalable cloud infrastructure and automated CI/CD pipelines**, ensuring environment parity, automated testing, and zero-downtime releases.

SENIOR SOFTWARE ENGINEER | SION CENTRAL – 10/2024-05/2026

- **Architected and managed multi-environment AWS and Kubernetes deployments** using reusable Terraform IaC modules, automating remote state management to guarantee 100% reproducible infrastructure.

- **Engineered high-performance Ruby and AWS APIs** optimized for complex financial arithmetic, significantly reducing data processing latency and accelerating reporting visibility for FinTech clients.
- **Built a scalable, multi-tenant financial reporting web UI from scratch** using Vue.js, TypeScript, and Tailwind CSS, delivering a modernized analytics dashboard for enterprise users.
- **De-risked high-volume financial transactions** by engineering automated GDPR and PII compliance pipelines, integrating RBAC, centralized secrets management, and strict CI/CD policy gates.
- **Implemented secure identity management infrastructure** using Auth0 and Terraform, successfully provisioning enterprise-grade SSO and MFA across all customer-facing applications.

LEAD SOFTWARE ENGINEER | BITSTOP – 06/2021-2024

- **Elevated system uptime to 99.95% and slashed operational overhead by 20%** by migrating critical e-commerce pricing APIs from Python to .NET Core, containerized via Docker and Kubernetes.
- **Accelerated development velocity and minimized production bugs** by directing 2 cross-functional teams totaling 13 senior engineers, establishing robust peer code-review systems, and standardizing technical documentation.
- **Optimized compute footprint and modernized legacy enterprise portfolios** by driving seamless, backward-compatible migrations from legacy .NET Framework to modern .NET Core.
- **Decoupled internal architectures and eliminated rigid HTTP chaining** by designing high-throughput microservices leveraging RabbitMQ for asynchronous message brokering.
- **Executed zero-downtime migrations of self-hosted financial services** to institutional-grade integrations (BitGo, Bitcoin Average APIs), drastically reducing infrastructure risk.
- **Eliminated manual configuration drift and established strict environment parity** by architecting multi-environment cloud infrastructure using Terraform IaC configurations.

SOFTWARE ENGINEER | AMADEUS HOSPITALITY – 02/2017 - 06/2021

- **Slashed average room turnaround times from 12 minutes to 7 minutes** by driving API integrations with core hospitality enterprise systems (OperaPMS, ShijiPMS, and HotSOS) to optimize back-office operations.
- **Bolstered system fault tolerance and infrastructure scalability** by transitioning monolithic hotel management stacks to modular cloud microservices leveraging C# APIs, Angular frontends, and Microsoft Azure.
- **Eliminated physical paper logging across hotel operations** by building and deploying native mobile integrations (Java/Kotlin for Android, Objective-C/Swift for iOS), delivering real-time tablet interfaces for on-the-ground staff.
- **Unlocked siloed legacy database analytics** by engineering advanced data-visualization and reporting modules, empowering administrators with deep operational insights.

SOFTWARE ENGINEER | ASSURANT IT SOLUTIONS – 10/2016 - 01/2017

- **Automated experimental payment processing workflows** by developing and embedding voice-driven Alexa Skills into web applications, significantly reducing manual touchpoints.
- **Enforced strict data governance and document consistency across enterprise cloud services** by designing custom integration layers connecting Microsoft SharePoint libraries via Power Automate.

PROGRAMMING TUTOR III | FIU STARS TUTORING – 02/2015 - 09/2016

- **Accelerated student retention and course pass rates** across advanced Computer Science modules by delivering targeted, individualized technical instruction and code mentorship.
- **Cultivated foundational engineering skills** in aspiring developers by conducting technical deep-dives into Operating Systems, Linux System Administration, Database Management, Application Security, and Object-Oriented Design.

SKILLS

- **Languages:** C# (.NET 10/Core/Framework), TypeScript, JavaScript, Ruby, Python, SQL, Bash.
- **Backend & Architecture:** ASP.NET Core, Entity Framework Core, LINQ, RESTful & GraphQL APIs, RabbitMQ, Microservices, OOP, IoC/Dependency Injection, Test-Driven Development (TDD).
- **Cloud, DevOps & IaC:** AWS (Lambda, S3), Microsoft Azure (Functions, App Services, App Insights), Google Cloud Platform (GCP), Kubernetes (K3s), Docker, Terraform, Packer, CI/CD (CircleCI, GitHub Actions), Auth0.
- **Databases & Caching:** PostgreSQL, MSSQL, MySQL, MongoDB, Redis, Elasticsearch, Cloud Firestore, Kusto (KQL).
- **Frontend & Mobile:** Vue.js, Angular, React, Tailwind CSS, Native Mobile (Kotlin/Java for Android, Swift/Objective-C for iOS).
- **Tools & Methodologies:** Git (Trunk-Based Development), Linux/Unix Systems, Agile (Scrum/Kanban), Jira, Linear, Bilingual (Fluent English & Spanish).
